A Data-Driven Dashboard for Analyzing Pizza Sales

This project focuses on developing an interactive dashboard in Microsoft Excel using a Pizza Sales dataset to provide a comprehensive and user-friendly overview of pizza sales performance over time.

Introduction: Why Data Matters

In today's data-centric business landscape, effective sales data analysis and visualization are essential for informed decision-making. This dashboard converts raw transactional data into meaningful insights.

Track Revenue Trends

Identify growth patterns and potential areas for improvement.

Identify Top-Selling Pizzas

Optimize menu offerings based on customer preferences.

Evaluate Peak Sales Periods

Support daily operational planning and staffing.

Optimize Inventory & Promotions

Reduce waste and maximize sales through targeted campaigns.

Dataset Preprocessing

Before building the dashboard, several preprocessing steps ensured data accuracy and usability.

Handling Missing Values

Missing entries in numeric fields were filled with appropriate aggregated values.

Data Cleaning

Redundant columns were removed, and text formatting was standardized for consistency.

Column Selection

Only relevant columns for sales analysis were chosen, including Date, Pizza Name, Category, Size, Quantity, Total Price, and Order Time.

Data Type Fixing

Numerical columns were correctly formatted to allow accurate aggregations and chart plotting.

Daily Sales Analysis

Monitoring short-term performance and identifying high-traffic days for operational planning.

Analysis Results

The dashboard highlights certain dates with high sales peaks, possibly indicating promotions, weekends, or holidays.

Day	Sales (₹)
Sunday	24,500.00
Monday	23,500.00
Tuesday	26,500.00
Wednesday	23,800.00
Thursday	22,500.00
Friday	24,200.00
Saturday	24,800.00

Made with GAMMA

Monthly Sales Trends

Evaluating monthly sales to identify seasonal patterns and understand long-term business growth.

Analysis Results

Certain months show increased sales volumes, indicating periods of higher customer demand and potential for targeted marketing.

Month	Sales (₹)	Percentage
January	60,098.05	37%
February	58,000.00	39%
March	58,000.00	38%
April	58,000.00	39%
May	58,000.00	38%
June	58,000.00	38%
July	58,000.00	39%
August	58,000.00	38%
September	58,000.00	37%
October	58,000.00	38%
November	58,000.00	38%
December	58,000.00	37%

Made with GAMMA

Best-Selling Pizza Category

Determining which pizza category contributes most to overall sales performance.

Analysis Results

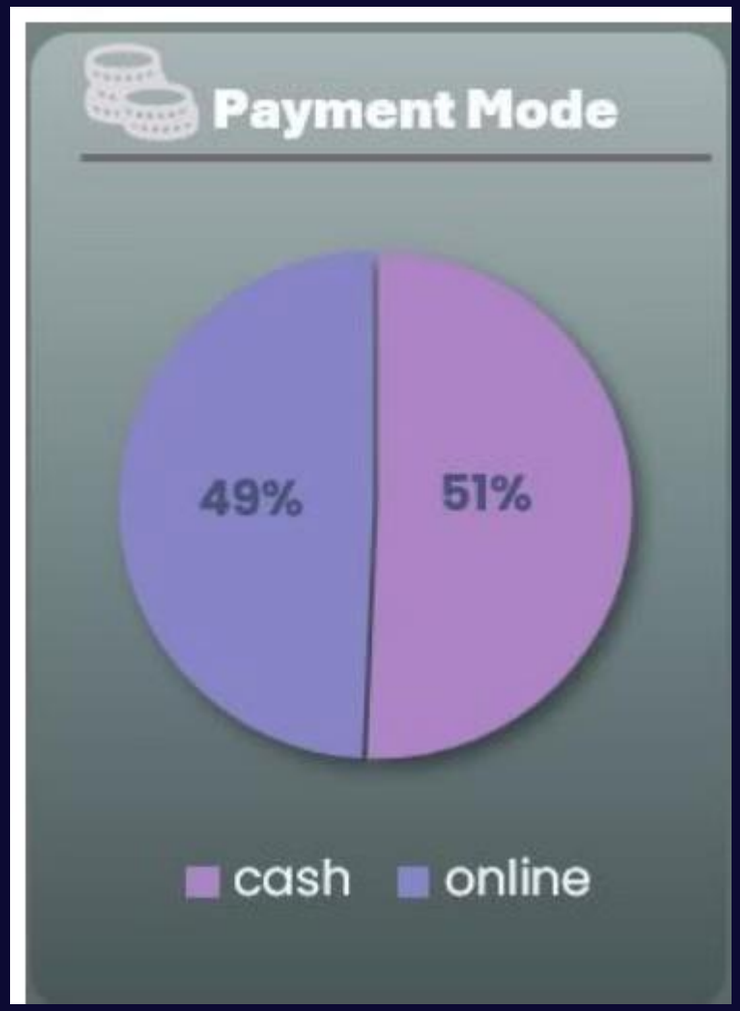
One or two categories dominate sales, indicating customer preferences and helping optimize menu offerings.

Pizza Category	Revenue (₹)
Veggie	1,47,880.50
Supreme	1,72,559.95
Classic	1,48,869.95
Chicken	1,43,764.75

Made with GAMMA

Payment Mode Preferences

Assessing the popularity of various payment methods to streamline checkout processes.



Analysis Results

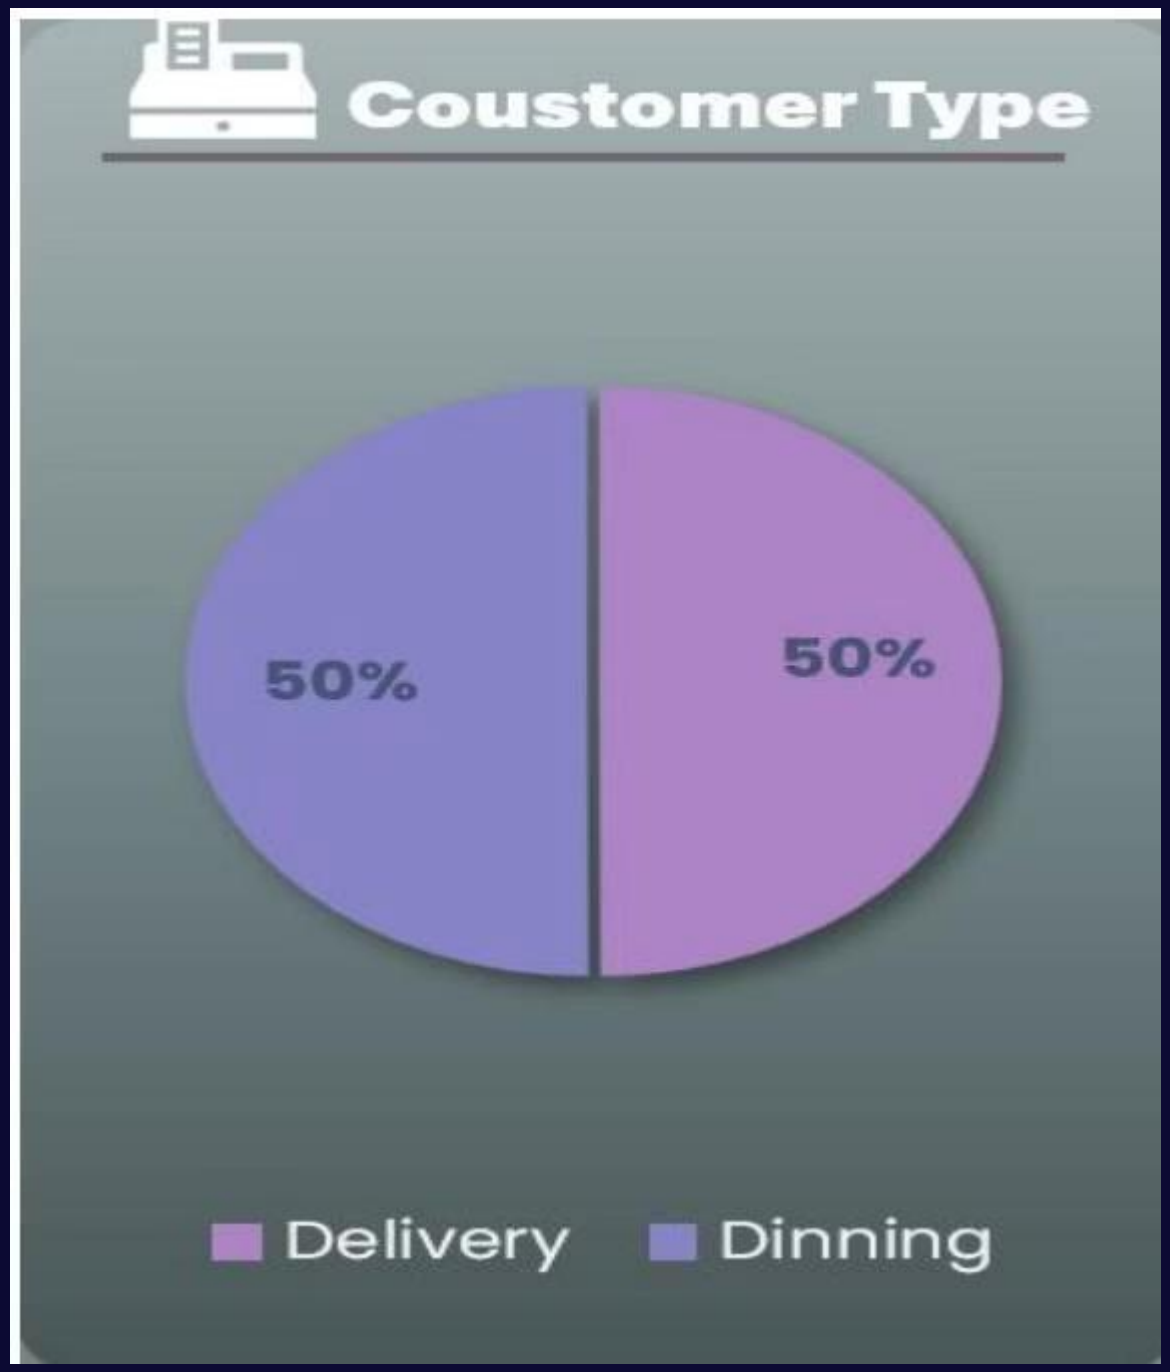
Digital payment methods show higher usage, reflecting evolving customer preferences and supporting investment in contactless options.

Payment Mode	Percentage
cash	49%
online	51%

Made with GAMMA

Understanding Customer Types

Differentiating between new and returning customers to analyze loyalty trends and develop targeted marketing strategies.



Analysis Results

Returning customers make up a significant portion of total sales, emphasizing the importance of retention and customer satisfaction.

Customer Type	Percentage
Delivery	50%
Dining	50%

Conclusion & Future Scope

The analysis highlights uneven air quality monitoring across locations, with some areas showing high pollutant levels and frequent measurements, while others lack data.

Visual Insights

Reveal pollution hotspots and data gaps, supporting informed decisions for targeted environmental action.

Improved Management

Enhance air quality management through data-driven strategies.

Future Enhancements

Integrate real-time data, forecast pollution with machine learning, and expand geographic coverage.

Health Impact

Correlate health impact data to enable proactive policy-making and effective environmental interventions.
